Nature In A Nutshell For Kids: Over 100 Activities You Can Do In Ten Minutes Or Less

Synopsis

Make bubbles that bounce! Stir up a tornado in a jar! Make elastic from a dandelion! Predict weather from cloud formations! Discover the beauty and wonder of nature all year round with these quick, easy experiments and activities from Jean Potter. You can complete each activity in ten fun-filled minutes or less, and the clear step-by-step instructions and illustrations help you get it right every time. The projects are organized by season and help you learn about everything from why grass is green to how seals stay warm in icy arctic waters. You will find most of the materials already in your home, backyard, or neighborhood. The 112 activities in this book cover every aspect of the natural world, including plant and animal life, weather, ecology, rocks and minerals, the senses, the stars, and much more. You'll build a mountain the same way the earth does, find out whether your neighborhood ants prefer sugar or artificial sweetener, discover why maple seeds act like tiny helicopters, and explore the effects of acid rain on plants--all with the help of a leading educator.

Children Ages 8-12

Customer Reviews

Nature in a Nutshell is a handy book for parents who want to inject some educational experiences in their child's daily learning routine. The book contains one- hundred and twelve total activities relating to nature and education and most of them can be performed quickly and easily, using items

available inside or immediately outside of most homes. The activities offered in the book are mostly simple and there are few materials necessary. Some activities are more complex, but most are basic and can be completed in a matter of minutes. The activities are divided up based on season and while this is a good way to organize, I think it would be better to organize based on difficulty level: beginner, intermediate, and advanced. This way, parents could slowly build up, from the easy to the more challenging, and increase their child's learning and confidence in the process. The book is recommended for children between the ages of eight and twelve, but I don't see why parents would want to wait this long to introduce their children to these learning activities. Younger children, in the four to eight age group, will enjoy the activities also. I admit that the explanations offered for the outcomes of these activities are likely going to be too complicated for children in these younger age categories, but children will still enjoy them and even if they retain only a small amount of information, they will have a head start over other children their age when they eventually enter school. I like that this book includes a reference section in the back, but one fact that puzzled me at first is that the list of important nature-oriented organizations doesn't include any web site addresses.
