Synopsis

A book all about rocks and minerals, in the expert reader strand. Much more than a simple spotters' guide! ROCKS AND MINERALS will enthrall young rock enthusiasts with amazing information about how rocks help us understand Earth and our own history, from early fossils to the treasure troves of pirates and the building of spacecraft. Superb artwork shows what is happening out of sight beneath Earth's surface in volcanoes, caves, and mines. Specially photographed galleries show off the beauty of rocks and minerals, and a simple key enables readers to identify any rock.

Customer Reviews

This book is actually pretty great. I am a librarian so I spent hours trying to pick out the right book for an 8 year old. It has many colorful and interesting photos. It has some actual science. I think some of the reading content may be a bit over the 8 year old's head, but she can grow into it and she really loved all of the photos. So this book is great for upper elementary students, possibly some early middle school. It really depends on reading level and interest in the content.

We purchased this book to accompany a kit of Geodes for our son. Our 1st grader is really interested in rocks, gemstones, crystals....especially mining for these treasures! After he cracked

open his geodes, he immediately read through this reference book to learn all about his new sparkly rocks! The book is very informative with plenty of beautiful color pictures! Great book for the budding scientist!

I bought two of these books for my grandchildren. Wow! They are very well done with lots of great information and interesting pictures. Highly recommend them for budding geologists!

Fun and informative. Great photos! My son loves rock and crystals especially and he is really enjoying this book. Thanks!

Wonderful book with tons of great pictures to engage the kiddos in learning geology. My 8 year old daughter & my 11 year old cousin both enjoy this book.

great book for kids to get their brains moving. Any boy or girl who is fascinated with rocks needs this book!

My son loved looking at this book, as did I! I also gave this book to a 15 year old and she loved learning about the information also.
