Grade Level: 2 - 5

Customer Reviews

This book and the other 'Take Along Guides' nature books (berries, nuts, seeds; birds, nests, eggs; rocks, fossils, arrowheads) are just what we were looking for to explore the outdoors with our young grandson. Each book has simple projects for the child to make. We purchased the Fun with Nature book that is a 'six in one' book and the four other Take Along Guides to make a complete set. We are pleased with the content of all five books we purchased. An excellent choice for beginners....

The title of this review said it all. I now own every copy of the set and love using them with my kids and at school!

This was a gift for my great-nephew who is eight. He absolutely loves this book. We bought him a telescope and this book was perfect for him to read about the different planets.

We got this book to go along with a telescope we got for my sons birthday. It gives more information

than some of the more basic books but it's not too much for my 6 year old son to understand.

My son loves these books

My 6 year old twin granddaughters loved it! They re-read it all the time! Highly recommended by grandfathers all over America.

This was purchased to accompany a telescope for my nephews 8th bday. He dug into the book right away and loves it!

We love it. Easy and put together in a way that my kids find interesting.
